CyberQuote

Gone are the days when we can rely solely on usernames and passwords to help protect our account security.

With data breaches occurring daily and hackers constantly inventing and using various tools to break into our network, it is paramount that businesses enhance their existing network security levels.

By using a login authentication, a user's identification can be verified through the device, preventing any unauthorized access and usage of the account data, enhancing security.

LOW COST

Affordable monthly fee for corporate users

CUSTOMIZABLE

Can be independently developed

EASY INSTALLATION

REST API can be connected to any third-party system

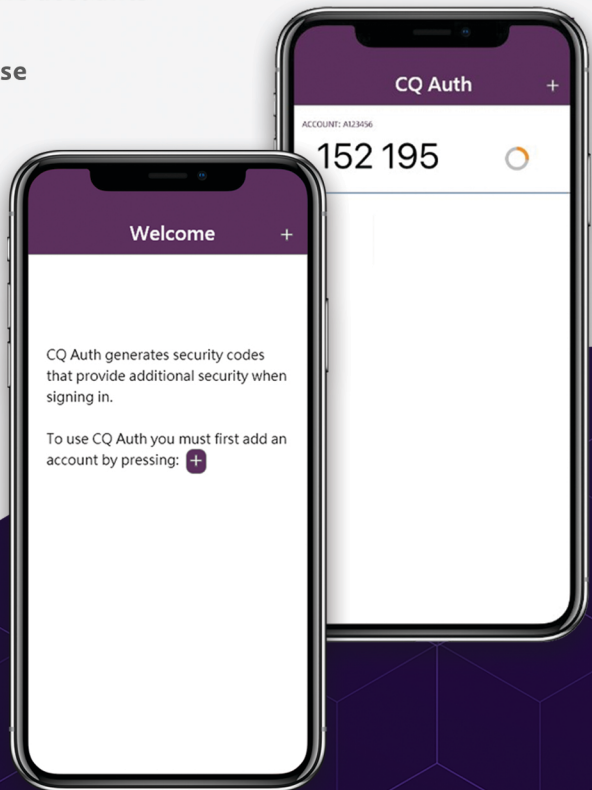

TECHNICAL SUPPORT

Technical support services provided

KEY FEATURES
